1. The Office of Central Reference is endeavoring to provide a more centralized service in support of the scientific and technical activities of CIA. As a first step, a focal point is established within the CIA Library, effective 18 May 1964, to provide information service on scientific and technical subjects. The responsible member of the Library is [redacted] of the Information Section, who will undertake to coordinate as necessary with other portions of OCR and with reference facilities elsewhere.
 2. Relocation of basic OCR services, e.g. document retrieval, and biographic or foreign language support, is not contemplated in the operation of the Scientific and Technical Information Service. It is intended, on the other hand, that the staff develop a clearing house capability to direct requests to appropriate components of OCR, the Agency, and other elements of the federal government as appropriate. To be of maximum usefulness, the staff will welcome and will seek awareness of the information needs and practices of analysts wherever these may profit from OCR attention and assistance. Some services requested by analysts will not be feasible in the short run. Over the longer run, however, OCR will make every effort to shift its resources to meet those needs found to be widespread in character.
 3. Selected scientific and technical journals of wide interest have been located on display shelving at the West end of the main Reading Room. These journals may be read in the Reading Room, or individual articles will be reproduced on request for office use. Comments are invited regarding the adequacy of the attached list of titles.
 4. In response to a request from ORD/DD/S&T, the CIA Library will provide an announcement service by means of reproduced tables of contents
